Product Description

Kress Mission RTKn 1 3/4 - KR174

Instructed by the Kress RTKⁿ network, it navigates your lawn with centimeter-level accuracy. No need for boundary wire nor fixed reference antenna to be installed in the lawn. The dead reckoning algorithm ensures accuracy where lines of sight to the satellites are blocked by trees and buildings. Operated by the MAP (Mowing Action Plan[™]) technology, it efficiently manicures lawns up to 1 3/4 acre large (1 1/4 acre recommended).

- Satellite-guided — no perimeter wire installation.
- Centimeter-level accuracy without the need for a fixed antenna on the lawn
- Systematic coverage in parallel lines for maximum mowing efficiency.
- Double layer blade system for high-density and slightly overgrown grass.
- Satellite-precise multi-zone management.
- Patented obstacle avoidance system
- Follows the shortest possible route to and from the charging station.
- Auto-levelling blade system adapts to terrain unevenness
