Product Description

Husqvarna 525BX Blower

Weighing less than 9.5 pounds, the Husqvarna 525BX blower is the lightest blower in its class*. Engineered with both a top handle and lower grip, the 525BX is easy to use with either the left or right hand. And the 525BX features an in-line tube that focuses its blowing force backwards, eliminating the fatigue caused by blowers with off-center designs. To further maximize user comfort, the 525BX has a unique LowVib™ design with rubber isolation in the handle for comfortably low vibration levels. Blow through any clean-up task with the superior CFM and air velocity of the 525BX. (*Based on weight of tool without fuel. Class defined as pro-grade petrol handheld blowers with engine displacement in the 25cc to 28cc range.)

Features -

- X-Torq® engine
- Adjustable tube length
